The screenshot shows the Firefox settings interface. On the left, a sidebar contains menu items: General, Home, Search, Privacy & Security (highlighted with a red box and an arrow pointing to the right), and Sync. The main content area is titled 'Content Blocking' and features a shield icon. The text reads: 'Protect your privacy while you browse. Block invisible content that tracks the sites you visit and profiles you. Blocking some of this content may make pages load faster. [Learn more](#)'. A 'Manage Exceptions...' button is located to the right. Below this, the 'Standard' option is selected with a radio button. The description for 'Standard' is: 'Balanced for protection and performance. Allows some trackers so websites function properly.' At the bottom, there is a checkbox labeled 'Known trackers only in Private Windows' which is currently unchecked.

El nivel debe ser estándar
