The screenshot shows the Firefox settings interface. On the left, a sidebar contains menu items: General, Home, Search, Privacy & Security (highlighted with a red box), and Sync. A red arrow points from the 'Privacy & Security' menu item to the 'Content Blocking' settings page. The 'Content Blocking' page features a shield icon and a description: 'Protect your privacy while you browse. Block invisible content that tracks the sites you visit and profiles you. Blocking some of this content may make pages load faster. [Learn more](#)'. A 'Manage Exceptions...' button is located in the top right. Below this, three content blocking levels are listed: 'Standard' (selected with a blue radio button), 'Strict', and 'Customized'. The 'Standard' option is highlighted with a light blue background and includes the text: 'Balanced for protection and performance. Allows some trackers so websites function properly.' and a sub-option: 'Known trackers only in Private Windows'.

Should be set to standard
